This document shows how to subset a single chart into one or multiple subcharts. The user can define the total number of observations plotted and the maximum number of observations plotted in a single subchart. The total number acts in respect to the most recent observations. The dashboard and the report show the (sub-) chart with the most recent observations under the 'Result overview' section regardless of the subchart settings. Also, a full chart with all observations is shown for every chart alongside the individual subcharts.
