### [Understand the full power of PLA 3.0.6](#)

As you surely know, we released PLA 3.0.6 last November. But to understand the full power of this update, I'm going to tell you more about the basic concept behind this product:

In highly regulated pharmaceutical and biotech industries, all steps from assay development to production require the highest support possible. Therefore, the most recent update to PLA 3.0.6 introduces new interfaces for electronic document management, the Attachments editor and a barcode system: Use the Attachments editor to export plots or add external files to supported documents. Barcodes allow you to conveniently organize and exchange assay data. Further quality-of-life improvements include quick access to document location and properties, the option to open documents by key or title, or the setup of print profiles. In addition, you can now send feedback or ask for support directly within the software to solve any issues in your daily routine.
