[PLA 3.0.6 improvements](#)

Our latest PLA 3.0 version, PLA 3.0.6, is a powerful tool that supports you in your daily work. Please allow me to tell you more about the PLA 3.0.6 improvements.

The quality and quantity of biological assay development as well as analysis strongly depends on the interplay of data organization and exchange. The attachment feature in PLA 3.0.6 allows you to directly export figures, e.g., for presentation purposes. It further simplifies data handling and maintenance. For example, attach Report files or link externally stored standard operating procedures to supported electronic documents with a few clicks. You can also use the barcode feature to print labels and distribute your PLA data. Provide the barcode to your coworker for quick access to the linked electronic document. In addition, you can now easily examine individual document properties, applied signatures, and the barcode by right-clicking the file and open the dialog. Use this information to get an overview of all documents on the database that share a specific property in the new Open dialog. Afterwards, simply open a selection of the documents for further use. Finally, PLA 3.0.6 provides you with the option to exchange feedback or any issues you might face with our support team by using the newly integrated dialog box. You can also attach document data to your message allowing us to properly investigate your request. [Read more about PLA 3.0.6.](#)
